

Gummiwerk KRAIBURG Field trip Sunday 10th of September 2017

Dear Lameness on ruminants' participants

Since 1968 KRAIBURG has been developing and manufacturing rubber mats for animal husbandry in Tittmoning/Germany. Today about 200 employees exclusively concentrate on that.

KRAIBURG has established as a quality and innovation leader in the market. Nowadays almost 2 million sq. m of rubber covers for floors in cattle houses are produced annually - quality made in Germany.

Dairy cows, young cattle, veal calves and bull fattening, equine matting, camels, pig keeping: KRAIBURG comfort lying mats and walking area coverings with abrasive surface for scraped alleys, slatted floor, collecting yards, travel lanes, parlours, etc. We'd like to show you our solutions and our rubber factory.

Abrasive rubber floorings create optimized claw abrasion, very similar to conditions in nature, where sandy constituents in the elastic soil ensure that horn formation and abrasion are kept balanced. With pediKURA® and profiKURA the abrasive agent corundum integrated into the surface and the elastic rubber soil provide for gentle claw abrasion and increased walking comfort.

We would be proud to welcome you in Tittmoning!
